For four decades JPL spacecraft have led the way in exploring our cosmic backyard, sending back the first close-up images of the planets and moons of our solar system. The public has been along for the ride, thanks to JPL's visualization pioneers. From grainy black and white television images of the moon to stunning state-of-the-art high-resolution 3-D images of Mars, you are invited to take a stirring visual tour of the planets and beyond.

PRESENTED BY JET PROPULSION LABORATORY,
OFFICE OF COMMUNICATIONS AND EDUCATION
